Weekly **MORBIDITY REPORT**

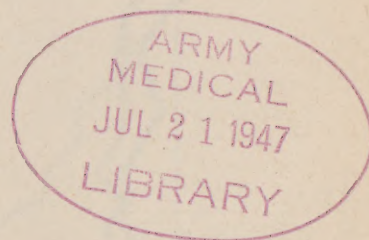

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

WEEK ENDING 22 June 19 46

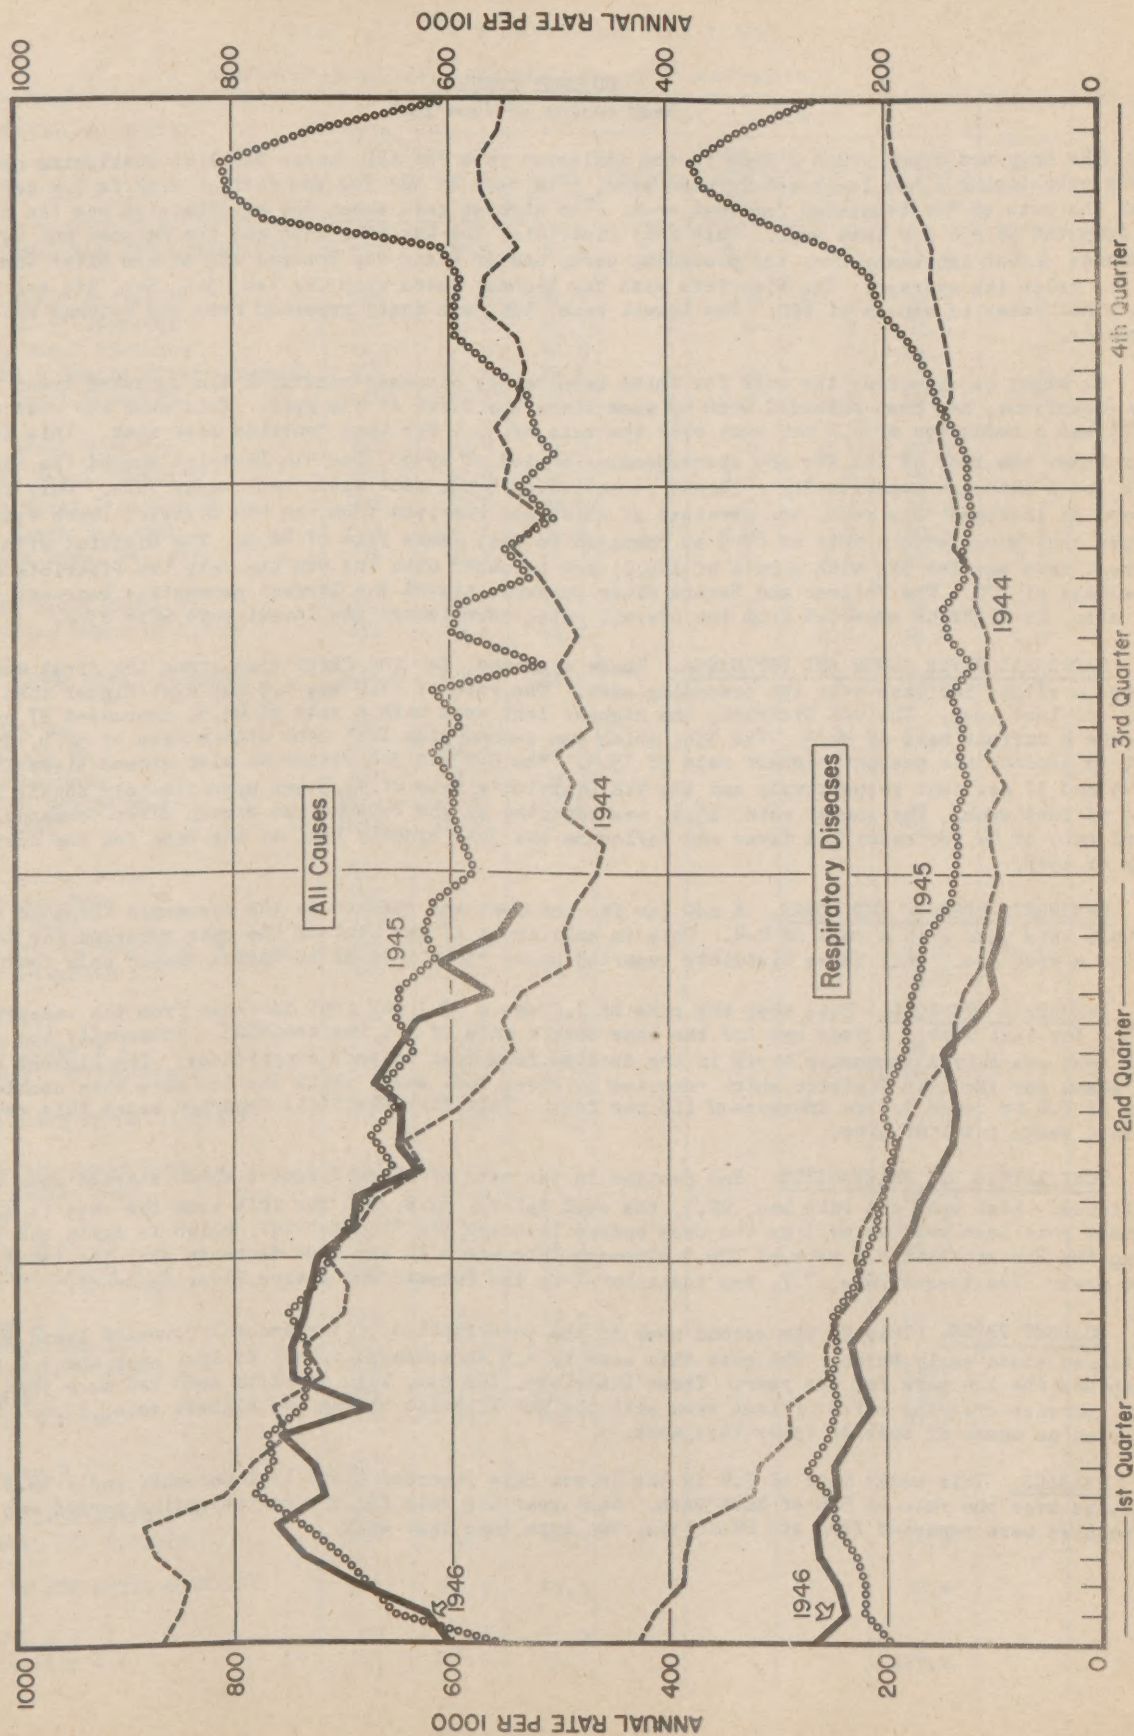

REPORT NO. 234

RESTRICTED—THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944, 1945, 1946

WEEKLY MORBIDITY REPORT

RESTRICTED

CURRENT TRENDS

Week ending 22 June 1946

The downward trend since 8 June in the admission rate for all causes is still continuing and this week again established a new low level for the year. The rate of 537 for the current week is 3.4 per cent lower than the rate of 556 tabulated for last week. The highest rate shown for any District was the 6th with 781 as compared to 808 for last week. Only four Districts, the 1st 5th, 13th and the Potomac and Severn River Commands showed increases over the preceding week, and of these the Potomac and Severn River Commands still is far below the average. The Districts with the highest rates were the 1st, 5th, 6th, 9th and 13th, all of which had rates in excess of 600. The lowest rate, 358, was again reported from the Potomac and Severn Commands.

As might be expected, the rate for Total Respiratory Diseases continued the downward trend that, with few exceptions, has been extended week by week since the first of the year. This week the rate was 90.4 which was a reduction of 6.2 per cent over the rate of 96.4 for that reported last week. This is considerably below the rate of 141 for the corresponding period of 1945. The 9th District showed the highest rate with 167.1 although experiencing a slight reduction of 3 per cent under last weeks rate. Only four Districts showed an increase this week, the greatest of which was received from the 4th District which experienced a 39 per cent surge with a rate of 67.9 as compared to last weeks rate of 48.9. The District with the second highest rate was the 5th with a rate of 149.1, and together with the 9th the only two Districts showing rates in excess of 100. The Potomac and Severn River Commands showed the largest percentage decrease (35 per cent) and also, as might be expected from the overall rate, experienced the lowest rate with 23.2.

CATARRHAL FEVER ACUTE AND INFLUENZA. These diseases, for the first time since the first week in May, showed a slight increase over the preceding week. The rate of 44.0 was 4.3 per cent higher than the rate of 42.2 for last week. The 6th District, the highest last week with a rate of 63.5, decreased 27 per cent to produce a current rate of 46.3. The 5th, which was second high last week with a rate of 56.9, jumped 32 per cent to produce the present highest rate of 75.3. The 8th and 9th Districts also showed sizeable increases of 45 and 37 per cent respectively and the 4th District's rate of 41.5 was approximately double the 21.0 rate of last week. The lowest rate, 15.4, was reported by the Potomac and Severn River Commands. The total rate of 44 for catarrhal fever and influenza was just exactly half of the rate for the corresponding week of 1945.

PNEUMONIA-BRONCHO AND LOBAR. A new low for the year was reached in the pneumonia (Broncho and Lobar) picture this week with a rate of 0.4. This is only about 17 per cent of the rate recorded for the same period a year ago. Only three Districts reported cases and the total incidence showed only four admissions.

PNEUMONIA ATYPICAL. This week the rate of 1.8 was a 57.1 per cent decrease from the temporary high rate of 4.2 for last week. A year ago for the same week a rate of 2.0 was recorded. Apparently the surge of the last week was only a temporary break in the decline from last winters experiences. The highest rate, 8.9, was shown for the 13th District which reported no cases last week, while the 5th more than doubled last weeks rate of 2.0 to reach 4.3 an increase of 115 per cent. Only five Districts reported cases this week as compared to last weeks total of nine.

TONSILLITIS AND PHARYNGITIS. The decline in the rate of these diseases which started week before last continued. Last week the rate was, 48.3, the week before, 52.8, and for this week the rate is 44.2. The highest rate last week as well as the week before last was the 9th District, which is again the highest among the Districts with a rate of 109.3 although this was a 16 per cent decrease over the 130.1 rate of last week. The lowest rate, 7.7, was contributed by the Potomac and Severn River Commands.

SCARLET FEVER. This is the second week of the interruption of the general downward trend which has continued since early March. The rate this week is 4.9 as compared to 4.1 of last week and 3.8 of 8 June, which was the low mark for the year. Three Districts, the 5th, 11th and 12th each had more than a 50 per cent increase over the rates of last week with the 5th District having the highest rate, 17.4. Six Districts reported no cases of scarlet fever this week.

MEASLES. This weeks rate of 3.4 is the lowest rate reported since last December and a 39.3 per cent decrease over the rate of 5.6 of last week. Last year the rate for the corresponding period was 3.0. Cases of measles were reported from six Districts, two more than last week.
